34. (A) what (B) that (C) who (D) where
35. (A) loading (B) planting (C) carrying (D) revising

III.閱讀測驗 (36~40 題，共 5 題)

The foods we eat are always changing, and new foods are just around the corner. There was a time when no one had ever tasted ice cream or potato chips. They were new concepts. Even vegetables and fruits change over time. Carrots, for example, used to be small and purple or white. In the future, there will no doubt be new tastes and new foods.

Food companies are secretive about their new, specialized foods, but we can guess how foods will probably change in the future. First, foods will probably be personalized. They will be made for each person’s needs. Perhaps personalized foods will no longer make people fat. In addition, improvements will be made to existing foods—such as chocolate that doesn’t melt in warm weather or drinks that stay cold for hours on their own. Another change will be new flavors and products. Perhaps plastic containers will be replaced by tasty, edible containers. Or maybe people will no longer even need to eat. There might be a point when microchips deliver foods directly into our stomachs. Scientists are always cooking up new technology.

Foods change and will continue to change. How do you think foods will change in the future?

36. What could be the best title for the reading?

- (A) Foods and Calories
(B) Foods and Nutrients
(C) Future Foods
(D) Future Changes in Healthcare

37. Which new food concept from the past does the writer mention?
